AssetCloud: How to migrate from MobileAsset?

Scott Kircher - 2016-04-25 - 0 Comments - in AssetCloud

As of April 21, 2016, we do not yet have an automated data migration process. You can export your current MobileAsset data into CSV files, then import that into AssetCloud.

Be aware of these limitations:

AssetCloud does not currently have a maintenance module. We are working on restoring that functionality.

The process of export-then-import cannot preserve transaction information. Even when an automated data migration feature becomes available, transaction information will be lost.
