AssetCloud OnPrem/InventoryCloud OnPrem: Redis will not start, gives 1067 error

Jason Whitmer - 2020-03-06 - in Cloud

Symptom: The Redis service will not start properly. When trying to start it manually, it gives a 1067 error, "The process terminated unexpectedly"

As a general rule, we have ****SOME**** self installing services which fall into this solution pattern:

```
{ Redis, Now Report Rendering service / Wasp Later Scheduling service }
```

ASP.NET / IIS / Sql Server / Message Queue services are NOT self installing services, so this general solution cannot be used.

For redis, the easiest way to fix corruption is (stop, delete the service, and reinstall/configure it)

1. Open a Command Prompt window with Run As Administrator, then enter the following commands:

```
cd %programFiles%
```

```
cd Redis-3.0.504-64bit
```

```
sc.exe stop "Redis"
```

```
sc.exe delete "Redis"
```

```
cd ..
```

```
ren "Redis-3.0.504-64bit" "Redis-3.0.504-64bit(deleted.2020.02.27)"
```

2. Explore the original distribution DVD/ISO or the folder path where you have downloaded and extracted the installer. Open this path: \Program Files 64\Wasp Barcode Technologies\Wasp On-Premises Software\

Right click this file and select Run As Administrator:

run.redis64.setup.bat

3. Open the Services list to confirm the Redis service is up again and it is set to auto start with retries.
