## Fontware - Scanner won't read barcodes created in Crystal Reports with WASP 39 fonts

Scott Kircher - 2017-04-10 - in [Discontinued Products](#)

When selecting a Code 39 font for use with Crystal Reports, put an asterisk at the beginning and end of the string you are converting to a bar code. When you print it, the Code 39 bar code will be readable. Also: keep the font size above 20.
