InventoryControl v5 & older: Error: Input String not in a Correct Format when trying to open the software.

Internal User - 2023-01-20 - in InventoryControl v5 and older

This article is for InventoryControl v5 or older. If InventoryControl v6 or newer gives this message, it is a different error condition and we will need their log files and backup.

In the Professional and Enterprise versions of InventoryControl, there is a problem if another application is already using the port that the License Manager wants to use. By default the License Manager uses port 10000. If this port is already being used the client machine may report this error message: **Input string was not in a correct format.**

To fix this problem, download and extract this file, then do the following:

<https://dl.waspbarcode.com/wasp/supportfiles/kbimages/DiscontinuedProducts/MI5ChangePort.zip>

ON THE SERVER

- 1) Run [Change License Manager Port.bat](#) to set the License Manager service to port 11,000.

ON THE CLIENT

- 1) Double click [MobileInventoryPort11000.reg](#) to update the registry to point to the new port number.
