InventoryControl v7: mobile device in batch mode: make sure the path is in connection.cfg

InventoryControl v7: mobile device in batch mode: make sure the path is in connection.cfg

Scott Leonard - 2019-01-22 - in Version 7

When you run InventoryControl from a mobile device, a message appears:

Failed to verify data install path. Please make sure the path is in connection.cfg exist

Cause:

The connection.cfg file is missing or corrupt. The following file contains the default path to the mobile device's database file.

Download and save the following file on your PC:

<http://dl.waspbarcode.com/kb/ic/v7/connection.cfg>

With the device connected to the PC, use Windows File Explorer to copy the downloaded file, then paste to this mobile device path:

\

Program Files

InventoryControl
