WKB1000 - Error: My keyboard is only partially programming. How do I fix this?

Scott Leonard - 2017-04-10 - in Hardware

When programming the keyboard using the keyboard utility, the keyboard must be connected directly to the keyboard PS/2 port.

If you have a scanner "wedged" between the keyboard and the computer, remove it while programming the keyboard.

You can replace it once the keyboard has been programmed.
