Android mobile device (DR2, DR3, DR4): How to take a screenshot

Scott Leonard - 2019-10-29 - Mobile Computers

How to take a screenshot: Press and hold the following buttons at the same time, for about 1 second: Power (right side top gray button) and Volume Down (left side bottom gray button). You should hear a sound effect, the screen will blink, and the image shrinks inward briefly.

How to find the screenshot you just took: Press the Home button (front bottom, second physical button), then tap the Application icon at the bottom (white circle with 6 dots). Find and tap: Gallery icon, Screenshot folder, screenshot image. Email it via the upper right icon, or perform other standard image operations.
