Asset/Inventory Cloud OnPremise installation rejects license key in non-US regions

Jason Whitmer - 2020-03-17 - in Cloud

Symptom: In regions that use a date format different than the US standard MM/DD/YYYY, there may be a situation where the installer rejects the license key with a message saying "Please enter a valid license".

Solution: Manually run the following file from the setup directory:

\\SSetupPrerequisites\\VcRedistx64\\vc_redist.x64.exe then try the installation with the same license key, and it should go through correctly.

Note: This issue should affect only the original installation disc/download. This updated

installer should properly accept the license key:

https://dl.waspbarcode.com/wasp/OPI_V1.04.04_2020.02.27.004.zip

This installer can be used for a fresh install, but should not be used to update an existing installation
