AssetCloud: In Transaction History, what does the record source (SYSTEM/REDO) indicate?

Scott Leonard - 2022-07-22 - [AssetCloud](#)

You may notice the record source (SYSTEM/REDO) related to a Check Out transaction.

This happens when an asset has been checked out, then the asset is moved to a different location. AssetCloud is performing a re-checkout transaction to the new location, in the background, and the system is making a record of what it did.

This is expected behavior.
