### Cloud LDAP/LDS Extraction tool fails, attempting to contact <https://localhost:44313/>

Scott Leonard - 2023-05-03 - in Cloud

August 2022

The LDAP/LDS Extraction tool has an issue where the WaspUtilities.ini file is not properly read, and errors are logged relating to the inability to contact <https://localhost:44313/>. Wasp is correcting this issue, and an updated Extraction tool will be released when ready.

In the meantime, another file can be edited to allow the tool to work correctly:

C:\Program Files (x86)\Wasp Barcode Technologies\UtilityInstaller\UtilityTools\ActiveDirectoryLDSExtractionTool.exe.config

original lines:

```
<add key="PublicApiToken" value="" />
<add key="PublicApiBaseAddress" value="https://localhost:44313/" />
```

In the PublicApiToken line, copy/paste the user's generated API token (the same one entered in WaspUtilities.ini) inside the double quotes toward the end.

In the PublicApiBaseAddress line, replace the value with the user's tenant URL. This can be for AssetCloud or InventoryCloud, web or On-Premise

Example of properly configured lines:

```
<add key="PublicApiToken"
value="JJlZnJlc2hfdG9rZW49Q11FOiUyV0FXJWpVQ1Jathisisnotavalidapitoken0diji5pc
3N1ZWQ9MDIvMTAvMjAyMiAwOTowNjowMcyZXF4U3FrN1owRVFuNGp2M3NpQWlS2pad3dZREk5V

<add key="PublicApiBaseAddress" value="https://example.waspassetcloud.com/" />
```

Assuming everything else is properly configured per the Help documentation, the Extraction tool should now work.
