### Cloud On-Premise: release builds and SQL Server compatibility

Scott Leonard - 2023-04-04 - in [Cloud](#)

Cloud On-Premise release builds and SQL Server compatibility

Initial Release: SQL 2012 or later.

Requires SQL 2016 or later:

Unreleased build 2022.08.18 (software version 2.1.4)

Release build 2022.10.31 (Software Version 2.1.5)

Later builds

Most customers will NOT be affected by this, since Wasp includes SQL Express 2017 for a

default installation. However, if a customer has chosen to install a Complete edition of Cloud On-Premise into their own instance of SQL Server 2012 or 2014, that SQL version must be upgraded to SQL 2016 or later, before updating Cloud On-Premise to its later version.

Cloud On-Premise releases after April 4, 2023 will contain a SQL version check before attempting to upgrade an earlier version of Cloud On-Premise.
