Cloud On-Premise: Stop and restart all services (bounce)

Scott Leonard - 2024-02-29 - in [Cloud](#)

Procedure to stop and restart ("bounce") all of the services for Cloud On-Premise, then recycle the IIS app pools:

Stop services in this order:

RabbitMQ

Redis

SQL Server (WASPDATA)

WASP Later Service

World Wide Web Publishing Service

Start services in this order:

SQL Server (WASPDATA)
World Wide Web Publishing Service
RabbitMQ
Redis
WASP Later Service
Wasp Now Service

Recycle Cloud OP application pools in Internet Information Services (IIS) Manager:

- a. At the upper left, click Application Pools.
- b. In the right pane in the Name column, right-click each of the three following names, then click Recycle. Notes: Do not click the similarly-named "Recycling". You will not see any feedback. There may be a slight pause before the system becomes responsive for the next task. The order does not matter. Names:

WaspPAPI
WaspPMVC (for earlier versions)
WaspPAC (For newer AssetCloud installs)
WaspPIC (For newer InventoryCloud installs)
WaspPSTS

=====

Making a batch file to perform the "Bounce"

If you want to make a batch file that will do this, include the lines below in a file called **"Bounce OP Services (Admin).bat"**. When you need to run the file, right-click it and **Run As Administrator**. The pause command at the end allows you to review the results before closing the command prompt.

*****Note: Because different versions have differently named Sites and Application Pools, there are 3 different potential batch files to accomplish the above.**
