## DR6: How to sideload an .apk file to the Android 12 mobile device (via download)

Scott Leonard - 2024-08-02 - [Mobile Computers](#)

DR6: How to sideload an .apk file to the Android 12 mobile device (via download)

One-time setup to allow this type of installation (i.e. if you've already done this, you don't need to do it again):

- Settings
- Apps
- Special App Access
- Install unknown apps
- Chrome
- enable "Allow from this source"

Install the file:

- In Chrome, browse to the link to the desired apk file.
- Choose where to download, tap Download button
- When complete, tap Open to go there.
- You should see your apk file. Tap it.
- If you have an earlier version of the app, there is a message "Do you want to update this app?" Tap Update to install.
- Tap Done or Open.
