## Fontware - How To include a carriage return in a barcode in Microsoft Access?

Scott Barnett - 2017-04-10 - in Discontinued Products

In order to do this in Access, you must have our add-in. In the barcode object properties, in the control source you can put (for example) ="bob" & Chr(13).

Chr(13) is a carriage return. Then when you print it, the barcode will have a carriage return embedded in it at the end.
