How do I update or patch to the latest version of Labeler 7

Sicaro - 2018-07-17 - Version 7

What is a patch?

A patch is new software that can fix something (sometimes called a software bug fix), provide new or updated hardware drivers, or enhance support issues such as compatibility, security or stability. It's a great way to easily update software without waiting for major new releases.

This patch will not update from an earlier version number. (e.g. Labeler v6 to v7)

How to apply the patch?

For this software patch, run the patch program on each client (desktop or laptop) PC. The patch program will update the software to run using the latest version.
