InventoryCloud/AssetCloud - Filters no longer default to "Contains"

Jason - 2023-03-22 - InventoryCloud Getting Started

The "Contains" filter type is not very efficient, so to greatly improve performance, the default behaviors of some of the filters have been changed from "Contains" to other filter types:

1. The auto-populated list in the filter search box at the top of the grid uses the "Starts With" filter type, to assist in selecting the correct filter term.

2. The grid/list filter type defaults to "Is Equal To". If you save a view with a different type, e.g. "Contains", then that saved view will continue using the saved filter type.
