InventoryControl - Does the remove track the dollar value associated with the removed item on a FIFO basis?

Sicaro - 2017-04-10 - [Version 7](#)

The inventory cost is removed FIFO and therefore the average cost is recalculated for each add and remove.

However, practically, most people are not going to know which item was actually taken out of stock and therefore not know exactly which value was removed. This may only be known if you are tracking by serial number. Therefore, the average cost is removed to the customer, instead of the actual cost as the actual cost may be not be known.
