# InventoryControl - Error - Microsoft SQL Server 2005 setup. The SQL Server Setup failed to compile the managed object format. "mos file c:\program files\microsoft sql server\90\shared\sqlmgmproviderxpsp2up.mof.

Internal User - 2017-04-10 - Version 6

The problem comes from corruption in the WMI repository, and it can be repaired easily. From a command prompt, running as administrator, run:

winmgmt /salvagerepository

You'll get an error, but the command has sent a stop request to the WMI service. Run the command a second time, and it will repair the repository.

Afterwards, retry running the Inventory Control installation.
