format. "mos file c:\program files\microsoft sql  
server\90\shared\sqlmgmproviderxpsp2up.mof.

Internal User - 2017-04-10 - in Version 6

The problem comes from corruption in the WMI repository, and it can be repaired easily.  
From a command prompt, running as administrator, run:

```
winmgmt /salvagerepository
```

You'll get an error, but the command has sent a stop request to the WMI service. Run the  
command a second time, and it will repair the repository.

Afterwards, retry running the Inventory Control installation.
