InventoryControl: The Inventory Cost Report does not show currency symbols.

Jason - 2025-01-07 - Version 7

The Inventory Cost Report is pulling its information from a view in the database, and that view omitted the currency symbol.

To resolve this issue:

1. Download https://dl.waspbarcode.com/wasp/supportfiles/InventoryCostReportDollars.zip and extract it on the database server machine.

2. Run **UpdateDB.bat** to update the database. This will update the database view to include the currency symbol as set in Windows for the report.
