InventoryControl v7.1: Printing labels gives error "Value cannot be null. Parameter name: serializedObject"

Jason - 2017-04-10 - [Version 7](#)

The same instructions apply when someone has a custom label with rotated objects that do not print properly from InventoryControl. In both cases, the labels print correctly in Labeler directly, but have issues from InventoryControl

** This started happening with ICv7.1 **

** Other symptom: After the first successful print or print preview, neither will work again (no error, just doesn't print) until the user quits and relaunches IC. **

Please download and apply the current patch from

<http://www.waspbarcode.com/support/updates-patches/inventorycontrol>

This will replace the .dll files that were incorrect in v7.1 and allow the label to print correctly.
