InventoryControl v7: print multiple items on one letter-sized page

Scott Leonard - 2025-01-07 - Version 7

Customers may want to print multiple item barcodes on pages of letter-sized paper (instead of printing multiple small individual labels). Optionally, these may be assembled into a "book" for reference.

The following downloadable zip files contain alternate Inventory Item.labx files that may be used standalone to print directly from the Labeler program, or replace the default file for printing from InventoryControl. Instructions and example PDF files are also included. Layouts included:

2 across & 20 down

4 across & 10 down

Files:
