InventoryControl v7: The printed Pick Order only shows 10 locations per item

Jason - 2025-01-06 - Version 7

Issue: The printed Pick Order only shows 10 locations per item, even when there is inventory in more locations.
Solution: A replacement report has been created to allow it to print up to 100 locations per item.

Download https://dl.waspbarcode.com/wasp/supportfiles/MoreLocationsPickOrder.zip and copy Pick Order.rpt into the Reports folder, C:\Program Files (x86)\Wasp Technologies\InventoryControl\Reports, on all client machines where the report will be used, overwriting the original file there.
