## **Is there any way ZPL printer commands can be sent directly to the printer using a client side, web-based Java or VB script?**

Internal User - 2017-04-10 - [Printers](#)

This article applies to all Wasp printers

With the ZPL version of the printer, if you send a ZPL string to the printer it will print it.

In your case, you can build a VB document in the background and send it to the printer.
