Labeler - Error - Labeler v7 not running properly in Windows 8

Internal User - 2023-01-20 - [Version 7](#)

The originally released version of Labeler v7 will not work properly in Windows 8.

Download and install version 7.0.5 from this link:

<https://dl.waspbarcode.com/wasp/WaspLabelerV705.exe>

This downloads a full installer, so it can be used to either update an existing installation that is not working properly, or to install from scratch.
