Labeler - Error - When I try to use the search feature to find a particular item in my ODBC connected database to print a label, I always get "NO MATCH FOUND" even when there are records that should match.

Internal User - 2017-04-10 - [Version 6](#)

Unfortunately, the search bar is from a third party control and it only works with a number of data sources. It will work with an Access database, but it doesn't work with ODBC data sources.
