Labeler - How To - How can I create custom label sizes?

Internal User - 2017-04-10 - Version 7

With Labeler, you can create your own Label size inside an existing family template.

To do so:

- File/page setup
- Select a Family (ie: Avery Laser)
- Click on New
- Enter the name for your new label (any name you like)
- Make sure that you deselect the "Lock Edits" option and change the parameters you wish to:
    - Number of labels across/down
    - page margins
    - Label size
    - Space between labels
