### Labeler v7 - How To - Data Source connection to Cloud On-Prem

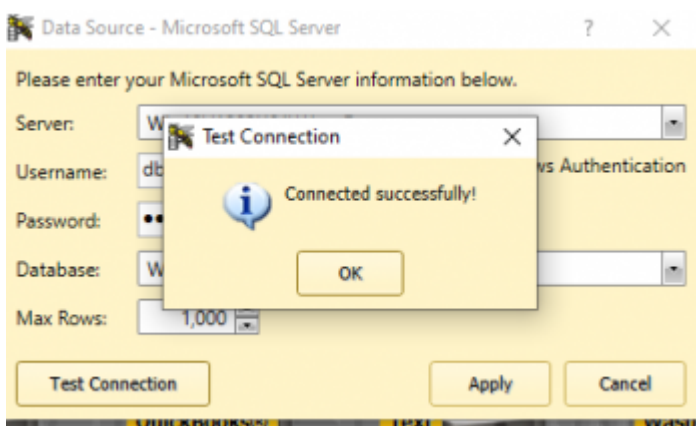

Stephen Shaver - 2023-01-19 - in Cloud

When using Labeler v7 with a data source, you can use your cloud product as the data source.

1. Connect Labeler v7 to Cloud via the MSSQL option on the data tab and you will get this.

2. Substitute PCNAME for your PC's name
3. UserName - dbo\_Reader
4. Password - db0\_Re4der-P455w0rd
5. Database - WaspTrack
6. Test the connection

7. Then Apply
8. You will then have the option to choose which data to use from the pull down.
