Labeler v7 is missing the Properties pane

Scott Leonard - 2017-04-10 - Software

Symptoms:

I am unable to modify objects in the Design tab.

Resolution:

1. At the **upper right corner** of the Labeler window, look for the word **Properties** written sideways in a box. If that is there, mouse over it to reveal the **Properties** pane. Once shown, you can click the **pushpin** icon at the **right side** of the **Properties** title bar to keep it open.

2. If that sideways box is not there, click the **Design** tab, then in the toolbar, click the **Reset Docking** button. This should bring back the Properties pane.
