Labeler v7 : Numbers overlap the bars after changing the % of Nominal for UPC barcodes

Jason - 2017-04-10 - Version 7

After creating a UPC barcode, if you change the % of Nominal setting, the system and check digits may overlap the bars.

To correct this, create a new barcode object on the label, and the digits will be repositioned so they no longer overlap. You may then delete the second barcode if you don't need it on the label.
