## MobileAsset: How to run Database Manager on Windows 8 & Windows Server 2012

Scott Barnett - 2017-04-10 - in Software

Windows 8 & Windows Server 2012 do not have the traditional Start Menu. How do I access the Database Manager program?

1. Launch **Windows File Explorer**.
2. At the top of the window, click the **View** tab.
3. In the Ribbon/toolbar, make sure **Hidden items** is checked.
4. Navigate to the following path:  
C:\ProgramData\Microsoft\Windows\Start Menu\Programs\Wasp  
Technologies\MobileAsset
5. You should see the MobileAsset shortcuts, including **Database Manager**, which you can then run.
