MobileAsset installer: Error 0 running command setup.exe

Jason Whitmer - 2017-04-10 - in Version 7

In some configurations of Windows, if you attempt to install MobileAsset v7 from a download, it will run the WinZip Self-Extractor, then give "Error 0 running command setup.exe" and quit.

If this occurs, right click on the download file, MobileAsset7.exe, and select "Run as administrator", then it should complete without error.
