MobileAsset: V6 Enterprise database creation scripts

Internal User - 2023-01-19 - Mobile Asset v6
If you need to manually create the MobileAsset database on an existing server by running SQL scripts rather than running the installation executable:

1. Download and extract the script files from https://dl.waspbarcode.com/wasp/supportfiles/InstallNewDbAsset624.zip then follow these steps:

2. Edit this file to replace SERVERNAME with your correct server (or server\instance):
File9=SetDefaultDatabase.sql

3. Run these scripts in the following order to install the default database:

File1=CreateWaspConfig.sql
File2=CreateAssetDataTypes.sql
File3=CreateAssetTables.sql
File4=CreateAssetViews.sql
File5=CreateAssetStoredProc.sql
File6=CreateTriggers.sql
File7=CreateWaspAccounts.sql
File8=Install_ENGLISH_Inserts.sql
File9=SetDefaultDatabase.sql

4. For customers with the Enterprise edition who need to create additional company databases via script:

Edit each script file in Notepad (or other text editor) and replace all instances of WaspTrackAsset with WaspTrackAsset_<NAME>, where <NAME> is the name of the database in SQL.

In SetDefaultDatabase.sql, you will also need to replace Default Company with the company name for the new database.

These files are current for MobileAsset application version 6.2.4 or 6.3 (database version 6.2.1).
