MobileAsset v7: Checking In to a new location does not move the asset

Jason - 2025-01-07 - Version 7

Symptom: When changing the asset's location during a Check In transaction on the mobile device, the pc client shows the asset was checked in, but it is not moved to the new location.

Resolution: Please download and apply this patch to correct the issue with location not changing when assets are checked in to a different location: https://dl.waspbarcode.com/kb/ma/v7/MobileAsset_Patch_715.exe

This will not retroactively correct transactions that have already been entered, but new transactions will work properly.
