

## MobileAsset v7/v6: Working with multiple assets with certain functions (Move, Check Out, Mass Update)

Scott Leonard - 2019-01-02 - [Version 7](#)

Here is a workaround for selecting multiple assets for use with Move, Check Out, and Mass Update functions of MobileAsset.

---

1. Select one asset, then click the function button in the toolbar.
  2. Use Filter or Custom Filter (Simplified or Advanced) to find the desired assets.
  3. Put a check in the items you want to work with.
  4. Continue with the operation.
- 

If a custom filter is difficult to set up, here is a method of simplifying the selection of desired assets:

1. If necessary, make a custom field visible/usable.
2. In the Asset List, select multiple items you wish to move. Shift-click for a range; Ctrl-click for single items.
3. Do a Mass Update of your custom field to a value such as "move".
4. Follow the procedure above, then create a custom filter for Custom Text X = 'move'.
5. Select All button, then perform the function.
6. Mass Update those assets so that Custom Text X is no longer "move", for the next time you do this procedure.
