QuickStore: How can I sell items with decimal quantities?

Jason - 2017-04-10 - QuickStore

1. In the Setup menu, select System Options, then tab 2. Inventory. Check the box for "Enable item quantities to be entered with decimal values".
2. In the Lists menu, select Inventory Standards. Edit the Code for the products that need to use decimal quantities. On tab 1. General, select either the option to "Sell items using a decimal quantity but purchase in whole quantities" or "Sell and purchase items using decimal quantities", as appropriate.
3. To enter the decimal quantity in the sale screen, either preface the quantity in the Scan/Qty box with a Q (e.g., Q1.5) to denote the entry as a Quantity, or double click the line item on the list and enter the decimal value into the Qty field.
