Quickstore: How do I install my workstations (additional lanes)?

Jason - 2021-09-23 - QuickStore

Before installing the workstations, make sure you have registered your Additional Lane License(s). The initial machine is covered by the main store license, but each additional workstation will need a lane license. To verify how many licenses have been registered, go to File > Registration > Current. Licensed Users will show the number of machines where you are allowed to run the program. To register additional licenses, or to purchase more if needed, please contact Wasp at 866-547-9277. Either sales or support can register licenses for you, but if you need to purchase a new license, please select 2 for Sales.

Once your licenses are all registered in the system, you will need to share the program directory from the main machine. Depending on the version of Windows on your machine, the steps may vary slightly, but will generally involve opening your Computer icon on the desktop or start menu, then looking in the C:\ drive, then right click on WQS and select Share. If there is a check box to "Allow network users to change my files" or similar, make sure that box is checked.

On the workstations, you will need to map a drive to that shared folder. Again, the steps may vary, but in most cases you can open your Computer icon, then click Map Network Drive, and browse the network. Select the main machine, then the WQS folder. Make sure the Reconnect At Login box is checked, then click Finish.

Open the new Network Drive location that was just created, then run the file **Set Up Workstation Access WQS.exe**. This will create the .int file for the workstation on the server, and also create an icon on the desktop of the workstation machine.
