Wasp Asset Updates Scheduled for October 8

On Thursday, October 8, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Asset - Cloud updates. During this scheduled maintenance, you can expect up to one hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

New and Improved

Bulk Asset Creation: On the New Fixed Asset page, use the toggle to enable bulk asset creation. This allows you to quickly create multiple assets of the same type without entering the same information for each one. Enter the shared asset information once, then add the asset tag and serial number for each individual asset. You can also use bulk asset creation when duplicating an existing asset. Watch the video overview.

Wasp Asset Mobile App Improvements: We continue to improve the new Wasp Asset mobile app to provide a better overall user experience. If you haven't downloaded the new app yet, we encourage you to check it out.

Wasp Inventory Cloud Updates Scheduled for September 10

On Thursday, September 10, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Inventory - Cloud updates. During this scheduled maintenance, you can expect up to one hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

Wasp Asset Updates Scheduled for September 10

On Thursday, September 10, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Asset - Cloud updates. During this scheduled maintenance, you can expect up to one hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

New and Improved

Wasp Asset Mobile App Improvements

We continue to improve the new Wasp Asset mobile app to provide a better overall user experience. If you haven't downloaded the new app yet, we encourage you to check it out.

Faster Lookup Creation

We've improved the lookup pages to make it faster and easier to manually create new lookups, including sites, locations, departments, depreciation methods, and more.

Improved Funding and Contract Pages

We've improved the Funding and Contract pages to make them easier to use and work with.

Import 2.0 Beta

We're introducing a new import experience that lets you download an Excel template and import everything at one time. The template includes separate tabs for each type of information you can import, making it easier to organize and complete your import. Currently, it supports importing new items only. Updating existing items and performing asset actions are not yet supported. Watch the video overview.

Wasp Inventory - On-Premise Software Update

A new version of our Wasp Inventory - On-Premise software is now available for customers with an active support and maintenance contract. You can download it here: <https://www.waspbarcode.com/op-downloads>. When prompted, enter this code: 26WBT8

For help with installation, contact our Technical Support team at 866-547-9277 option 3, or through a support ticket.

To install this update, you will need an active license. If you need to renew your license, please contact our Customer Success team at renewals@waspbarcode.com or call 469-960-2215.

Here is what you can expect in this release when you update your Wasp Inventory - On-Premise software.

New and Improved

Improved Customer Lookup

When selecting a customer for removal, check-out, or pick orders, you can now search by company name in addition to customer number.

View Items within Purchase Order Grid

You can now expand purchase orders directly in the grid to quickly see the items included, without opening each order.

Updated Vendor Page Interface

Updated Customer Page Interface

Assign Payment Methods for Customers and Pick Orders

You can now add a payment method to a customer record and have it automatically populated on new pick orders. You can also manually select a payment method on a pick order when needed.

Improved Pick Order Creation

The Pick Order page has been updated to help you create pick orders more quickly. Watch the video overview.

Simplified Purchase Order Creation

The Purchase Order page has been updated to help you create purchase orders more quickly. Watch the video overview.

New Import 2.0 Experience (Beta)

We're working on improvements to our import process and have released a beta version of a new import experience. The previous import option remains available. With the beta version, you can import multiple types of data from a single spreadsheet with multiple tabs instead of uploading separate files for each import. We've also improved field mapping and error handling. A new import template is available for download directly from the import page. Watch the video overview [here](#).

New Action Bar on the View Items Page

A new action bar lets you add, remove, move, and check items in or out directly from the item grid without leaving the page. If you are using trackbys it will direct you to the corresponding action page. Watch the video overview [here](#).

Wasp Asset - On-Premise Software Update

A new version of our Wasp Asset - On-Premise software is now available for customers with an active support and maintenance contract. You can download it [here](https://www.waspbarcode.com/op-downloads): <https://www.waspbarcode.com/op-downloads>. When prompted, enter this code: 26WBT8

For help with installation, contact our Technical Support team at 866-547-9277 option 3, or through a support ticket.

In order to install this update, you will need to have an active license. If you need to renew your license, please contact our Customer Success team at renewals@waspbarcode.com or call 469-960-2215.

Here is what you can expect in this release when you update your Wasp Asset - On-Premise software.

New Wasp Asset Mobile App

We're excited to announce the launch of the new Wasp Asset mobile app. The app works on both Android and iOS devices, but where it really shines is with the Wasp DR6 mobile computer. You must install this software update to use the new mobile app with your database.

Perform check-outs, check-ins, moves, disposals, and audits more quickly than ever. Updated search and

filtering make it easier to find the asset information you need. If you have an RFID subscription for Wasp Asset, the new app also supports RFID tracking to perform actions even faster than with barcode scanning.

This is the first release of the new app, and more features will continue rolling out in the coming months. Watch the video overview to see what's new.

Wasp Inventory Cloud Updates Scheduled for August 13

On Thursday, August 13, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Inventory - Cloud updates. During this scheduled maintenance, you can expect up to one hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

Wasp Asset Updates Scheduled for August 13

On Thursday, August 13, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Asset - Cloud updates. During this scheduled maintenance, you can expect up to one hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

New and Improved

Wasp Asset Mobile App Updates

We continue to improve the new Wasp Asset mobile app with new capabilities, including offline access and group auditing. If you haven't downloaded the new app to your Wasp mobile computer or Android or iOS phone, we encourage you to try it out. We believe the new app offers a significantly improved user experience.

Wasp Asset Updates Scheduled for July 16

On Thursday, July 16, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Asset - Cloud updates. During this scheduled maintenance, you can expect up to an hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

New Wasp Asset Mobile App (Updates)

We've continued improving the new Wasp Asset mobile app and fixed several issues reported since its launch.

On Wasp DR5 and DR6 mobile computers, the app automatically recognizes the built-in barcode scanner. You can also scan multiple assets into a queue and perform the same action on all of them at once, helping you complete transactions faster.

On Android and iOS phones, the app uses your device's camera for barcode scanning.

If you haven't tried the new app yet, we encourage you to download it. The previous mobile app will remain available and fully functional while we continue to improve the new app.

- Download the Android app
- Download the iOS app

Additional Improvements

View Checked-Out Multi-Quantity Assets

On the multi-quantity asset page, you can now see how many items are currently checked out. Select the checked-out quantity to view who has each item assigned and check items back in directly from that list.

Print Asset Tags

Added the ability to print an asset tag directly from the multi-quantity asset page.

Wasp Asset Updates Scheduled for June 18

On Thursday, June 18, at 9:00 p.m. CDT, [Wasp Barcode Technologies](#) will roll out the latest updates for Wasp Asset - Cloud. During this scheduled maintenance, you can expect up to one hour of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

New and Improved

New Wasp Asset Mobile App (Updates)

We've made a lot of improvements to the new Wasp Asset mobile app and resolved several issues reported since its launch. The app is available for both Android and iOS devices by searching for "Wasp Asset" in the app stores.

On Wasp DR6 and Wasp DR5 mobile computers, the app recognizes the built-in scanner and makes transactions faster by allowing you to scan multiple assets into a queue before performing the same action on all of them at once.

On Android and iOS phones, the app uses the device camera for barcode scanning.

The previous mobile app remains available and can still be used.

GPS Tracking Enhancements

We recently announced our new GPS tracking feature that works with Wasp-approved GPS tracking hardware. This now includes geofencing capabilities.

Receive notifications when assets exit a designated geofence and automatically trigger actions such as moves, check-ins, and check-outs based on when an asset enters a geofence.

If you would like more information about integrating GPS tracking with your existing Wasp Asset subscription, contact your Wasp sales representative or call Wasp Sales at 866-547-9277, option 2.

Redesigned Asset Type Page

The Asset Type page has been updated with an improved design.

Check out this video for a brief overview:

[Asset Type Page Overview Video](#)

Redesigned Multi-Quantity Asset Page

If you use multi-quantity assets in addition to fixed assets, you will notice a redesigned multi-quantity asset page that follows the style of the new View Fixed Asset page.

Upcoming AssetCloud Improvements

On Friday, May 9, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out improvements to AssetCloud. Some downtime is expected due to server maintenance.

If you have any questions or need assistance, please contact Wasp Technical Support at 866-547-9277 option 3, or submit a support ticket. We're continuously improving AssetCloud and appreciate your patience as we work to enhance your experience.

New & Improved

- **Reports Page Refresh:** The Reports page has a new look. You can now favorite reports by clicking the star next to each one. Favorited reports will display at the top of your list for quicker access.
 - New Reports Page_updated
- **Faster Access to Labels and Receipts:** You will now find Labels and Receipts menu options listed directly under Reports, making them quicker to access.
 - New Reports Menu_cropped
- **Add Your Company Logo:** You can now upload your own logo under Company Details. It will replace the default AssetCloud logo throughout the software.

Navigation Updates

- **Left Menu Reorganized:** We've restructured the left menu for better flow. "Calculate Depreciation" and "Mass Update" are now under the Actions menu (formerly called the Transaction menu).

Performance Enhancements

- **System Improvements:** We've made behind-the-scenes updates that enhance performance, strengthen security, and improve overall reliability.
- **Bug Fixes:** A series of bug fixes has been applied to improve overall system stability.

Upcoming InventoryCloud Improvements

On Friday, May 9, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out improvements to InventoryCloud. Some downtime is expected due to server maintenance.

If you have any questions or need assistance, please contact Wasp Technical Support at 866-547-9277 option 3, or submit a support ticket. We're continuously improving InventoryCloud and appreciate your patience as we work to enhance your experience.

New & Improved

- **New Hyperlink Custom Field Type:** Add hyperlink fields for items, customers, vendors, purchase orders and pick orders that will open up the link in a separate tab.
 - **Custom Fields for Purchase Order Reports:** Use the report designer to add custom fields to purchase order reports.
 - **Custom Fields for Pick Order Reports:** Use the report designer to add custom fields to pick order reports.
 - **View and Edit Scheduled Report Parameters:** You can now view and edit the parameters of scheduled reports.
-

Performance Enhancements

- **System Improvements:** We've made behind-the-scenes updates that enhance performance, strengthen security, and improve overall reliability.
- **Bug Fixes:** A series of bug fixes has been applied to improve overall system stability.

Wasp Asset Updates Scheduled for May 14

On Thursday, May 14, at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out the latest Wasp Asset - Cloud updates. During this scheduled maintenance, you can expect up to 45 minutes of downtime.

If you have any questions, our Technical Support team is ready to help at 866-547-9277 option 3, or through a support ticket. Thank you for your patience during this time.

New Wasp Asset Mobile App

We're excited to announce the launch of the new Wasp Asset mobile app. The app works on both Android and iOS devices, but where it really shines is with the Wasp DR6 mobile computer.

Perform check-outs, check-ins, moves, disposals, and audits more quickly than ever. Updated search and filtering make it easier to find the asset information you need. If you have an RFID subscription for Wasp Asset, the new app also supports RFID tracking to perform actions even faster than with barcode scanning.

This is the first release of the new app, and more features will continue rolling out in the coming months. Watch the video overview to see what's new.

How to Download:

1. Scan one of the QR codes below or search for "Wasp Asset" in the App Store or Google Play.

Please note: The latest version of the app, including the newest features announced in this release, will be available after May 14 at 10:00 p.m. CDT. If you download the app before then, make sure you update it after the release to access the newest features and improvements. The existing Wasp Asset mobile app will continue to work at this time.

1. Sign in by entering your tenant name, username, and password. You no longer need to enter the full tenant URL.

Additional Updates in this Release

- **Redesigned View Asset Page:** The View Asset page has been updated to bring the most important asset information into one place. Asset details, attachments, recent activity, grouping information, and depreciation status are now easier to view without switching between tabs or pages. When you open an asset, the page starts in read-only mode. Select the Edit button in the bottom right to enable edit mode. This page will continue to evolve as new capabilities are added. Watch the video overview.
- **Redesigned New Asset Page:** New Asset page has been updated with a cleaner layout and a more organized setup to make entering asset information faster and easier. Improved field ordering and defaults help you add assets more quickly with fewer clicks.
- **GPS Tracking (BETA):** Wasp Asset can now be paired with approved GPS devices. Once a GPS device is connected to an asset, you'll be able to see its real-time location and track any asset movement directly from Wasp Asset. To learn more about Wasp GPS tracking, please contact your Wasp sales rep or call our sales team at 866-547-9277 option 2.
- **"What's New" Announcements:** After each update, you'll now see a "What's New" message when you log in so you can quickly review the latest features and improvements. You can view these updates anytime by clicking the "?" icon in the software and selecting "What's New".
- **Bug Fixes:** A series of bug fixes has been applied to improve overall system stability and performance.
- **Performance Improvements**

Wasp Inventory Cloud Updates Scheduled for May 14

On Saturday, March 9, at approximately 9:00 p.m. CST, Wasp Barcode Technologies will roll out improvements to InventoryCloud.

Improvements Include

- Create custom fields on purchase orders and pick orders
- New fields on purchase orders calculating currency amounts
- Print barcodes from the Android mobile app
- Schedule reports in Excel format
- Improved performance of large item import files
- Import for item minimum and maximum stock levels at the site level
- Filter button on pick orders to show only orders you created, available in both the web and Android mobile app
- Improved sorting and filtering of archived transaction history
- Set default shipping providers for a customer
- Custom fields can now be viewed on the low stock grid
- Customizable timeout setting for the Android mobile app
- Bug fixes

Wasp Asset & Inventory Cloud Updates (Legacy Releases)

October 21, 2023

InventoryCloud Improvements

On Saturday, October 21st at 9:00 p.m. CST, Wasp Barcode Technologies will roll out improvements to our InventoryCloud product. There will be some downtime due to server maintenance. You may also experience slowed performance during this time.

In addition to bug fixes, you will find the following new features:

- **ShipStation integration.** Connect your InventoryCloud account to your ShipStation account. When you create a pick order in InventoryCloud, it will send that order to your ShipStation account. Then in ShipStation, you can choose your shipping provider, your shipping method and view costs. Once you finalize your shipping choices, ShipStation will create your shipping label and then send the shipping details (shipping provider, shipping method, and tracking number) back to InventoryCloud and update your Pick Order with that information. It will also update the order status to “shipped.” This ShipStation integration is an add-on feature for your InventoryCloud. For more information, please reach out to your Wasp sales representative directly or call us at 866-547-9277.
- **Shopify, Big Commerce and Woo Commerce integrations.** Connect your InventoryCloud account to your e-commerce shopping cart account. Save time by not having to manually set up pick orders. When an order is placed in your e-commerce store, it will automatically generate a Pick Order in InventoryCloud. Once the order has been picked, it will send the order details back to your e-commerce store. This integration is an add-on feature for your InventoryCloud. For more information, please reach out to your Wasp sales representative directly or call us at 866-547-9277.

If you experience any issues, please contact Wasp technical support at 866-547-9277, and select option 3, or visit our support center to submit a ticket.

AssetCloud Improvements

On Saturday, October 21st at 9:00 p.m. CST, Wasp Barcode Technologies will roll out improvements to our AssetCloud product. There will be some downtime due to server maintenance. You may also experience slowed performance during this time.

In addition to bug fixes, you will find the following new features:

- A new purchase order system for multi-quantity assets. You will be able to create a purchase order, send it to vendors, and use our “receive” function when the order arrives. This is strictly for multi-quantity assets, allowing you to indicate the quantity ordered and the quantity received. You can use the “convert” feature after receiving the assets to convert them from multi-quantity assets to fixed assets if you need to track unique information about each one.
- A new archived transaction grid. We previously created an archive function for transactions to improve performance of our database and transaction history grid. If you perform a transaction archive, this grid will allow you to see all the archived transactions that no longer display on the transaction history grid.

If you experience any issues, please contact Wasp technical support at 866-547-9277, and select option 3, or visit our support center to submit a ticket.

February 4, 2023

InventoryCloud Improvements

On Saturday, February 4, 2023, at 9:00 p.m. CST, Wasp Barcode Technologies will roll out improvements to our InventoryCloud product. There will be some downtime due to server maintenance. You may also experience slowed performance during this time.

Below is a list of improvements you will find in InventoryCloud after the release.

- New e-commerce integration for Shopify. Connect your Shopify account to InventoryCloud and bring your orders from Shopify into InventoryCloud as pick orders. If you are interested in this integration, please contact your sales representative. We plan to integrate with additional e-commerce platforms over the next year and we would like to know which platforms you are the most interested in. Please complete this brief survey to share your thoughts - we appreciate your feedback!
- A new site tab on each item that allows you to set up minimum/maximum stock levels at the site level. Notifications can be set up to alert when a site falls below minimum stock level. The low stock grid will also show items below minimum stock level for the site.
- Ability to save a partially built assembly.
- Ability to disassemble an assembly. This works off the build order, so it will not work with assemblies built with the auto-build feature. When a disassemble is performed, the individual items will go back to the location they came from, unless the item is designated to be scrapped on disassemble.
- New API calls for vendors including create new, update, search and delete.
- New API calls for manufacturers including create and edit manufacturers. For more information on our available APIs, please visit <https://marcic.waspinventorycloud.com/help/api>

AssetCloud Improvements

On Saturday, February 4, 2023, at 9:00 p.m. CST, Wasp Barcode Technologies will roll out improvements to our AssetCloud product. There will be some downtime due to server maintenance. You may also experience slowed performance during this time.

Below is a list of improvements you will find in AssetCloud after the release.

- New API calls for departments including create new, update, search, and delete.
- New API calls for vendors including create and edit.
- New API calls for manufacturers including create and edit.

For more information about our available APIs, please visit <https://marcedu.waspassetcloud.com/help/api>

- Integration with Zapier. Zapier allows you to connect two of their 5,000 web apps to one another without any code writing abilities needed. Currently, AssetCloud has Zapier triggers for create new asset, asset checked out, asset disposed, and asset moved.

Example: You can connect AssetCloud to SMS Zapier and receive a text message for one or all of those triggers.

2nd Example: You can connect a Google Sheet of assets to AssetCloud and when a new row is entered into the sheet, it will trigger a new asset creation with that information in AssetCloud.

For more information, visit <http://www.zapier.com>, search for "Wasp AssetCloud" and then search for the app you want to connect AssetCloud to. The Zapier connections are set up on Zapier's site, not in AssetCloud itself.

Improved performance.

Bug fixes.

If you experience any issues, please contact Wasp technical support at 866-547-9277, and select option 3, or visit our support center to submit a ticket.

July 16, 2022

InventoryCloud Improvements

On Saturday, July 16 at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out improvements to our InventoryCloud product. There will be some downtime due to server maintenance. You may also experience slowed performance around this time. After the update, if you experience any issues or have questions, please contact Wasp technical support at 866-547-9277, and select option 3, or visit our support center to submit a ticket.

Improvements you will find in InventoryCloud after the release, include:

- Changes to the move transaction page in the web queue. Now, you can move items in the web queue to different sites and locations. Previously, all items in the web queue had to move to the same site and location.
- New transaction history and orders archive. You can go into settings and archive historical transactions, historical pick orders, and purchase orders prior to a selected date. This history will be removed and can only be seen on the transaction history archive report, the pick order archive report, or the purchase order archive report. This will not change or delete any items or quantities that currently exist for your items. This feature also comes with a new permission for archiving.
- Ability to export user list from the users page.
- Improved callouts and public API functions.
- Implemented a 10,000 records cap for on-demand reports and a 64,000 records cap for scheduled reports. If you run a report that is larger, it will be cut off at that limit and you will need to use filters to get your data in segments.
- CAC reader support for Android.
- Ability to turn off emailing of purchase orders in settings.
- Ability to add quantity to assembly items via the add transaction or inventory import.
- Ability to attach photos from the Android and iOS apps.
- New user interface UI for the Android and iOS apps. We have changed the search page and added a new item details page. To find the new search UI, go to the upper right of the main page and select the magnifying glass. This will show the items, a photo (if "show photos" is enabled in the app settings), and the quantity. You can click on the drop-down menu in the upper left to search by something other than item number, such as serial number, lot, date code, or all. ("All" will allow you to search any of these as well as a description of the item.) If you click a single item from the search page, it will bring up the new item details page. The item details page will show you information about the item, each location that contains quantity, and transaction performance buttons at the bottom. The locations can be clicked to see tracking details at each location if you use trackbys.

*Your screens may look slightly different depending on what device you use.

Announcement: Microsoft has retired Internet Explorer. As a result, after our next update we will no longer support it with this product.

AssetCloud Improvements

On Saturday, July 16 at 9:00 p.m. CDT, Wasp Barcode Technologies will roll out improvements to our AssetCloud product. There will be some downtime due to server maintenance. You may also experience slowed performance around this time. After the update, if you experience any issues or have questions, please contact Wasp technical support at 866-547-9277, and select option 3, or visit our support center to submit a ticket.

Improvements you will find in AssetCloud after the release, include:

- Changes to the move transaction page in the web queue. Now, you can move assets in the queue to different sites and locations. Previously, all assets in the web queue had to move to the same site and location.
- New transaction history archive. You can go into settings and archive historical transactions prior to a selected date. This history will be removed and can only be seen on the transaction history archive report. This will not change or delete any current details for your assets. This feature also comes with a new permission for archiving.
- Ability to export user list from the users page.
- New “Multi-qty Asset” report.
- Improved callouts and public API functions.
- Implemented a 10,000 records cap for on-demand reports and a 64,000 records cap for scheduled reports. If you run a report that is larger, it will be cut off at that limit and you will need to use filters to get your data in segments.
- Ability to update custom fields that have been designated as editable fields on checkout transactions via the checkout import.
- Recent user interface (UI) changes to the mobile app. If you have updated your mobile app lately you might notice some UI changes. The app now includes more details on the search page. You can see an asset image (if “show photos” is enabled in the app settings), where the asset is located, and details such as if the asset is checked out and to whom. To find the new search UI, go to the upper right of the main page and select the magnifying glass. The search page allows you to choose different search criteria, such as serial number, asset type, description, site, location or assignee. If you click on an individual asset, it will pull up a newly-designed asset details page to see more information about the asset. To perform a transaction on the selected asset, click the three dots in the upper right and choose which transaction you need to perform.

*Your screens may look slightly different depending on what device you use.

Announcement: Microsoft has retired Internet Explorer. As a result, after our next update we will no longer support it with this product.
