LABELER V 6.0.9

Labeler 6.0.9 addresses the following issues:

1. Fixed the Print and Print Preview displaying data from other columns than the mapped columns in the label.
2. In some cases Print/Print Preview will display an error message regarding incorrect columns.

LABELER V 6.0.8

Labeler 6.0.8 addresses the following issues:

1. ZPL and EPL printers now show in the printer list.
2. Fixed printer settings rounding issue. This will help really small tags or tags with small decimal portions to not drift when printing.
3. If an EDS table is changed but the fields are the same, the field mpapings will be maintained.
4. Obtained QuckBooks(TM) certification.
5. Sped up print and print preview significantly .

LABELER V 6.0.7

Labeler 6.0.7 addresses the following issues:

1. Removed the printer margin line from the print preview window on the printer setup tab. It did not properly reflect the correct margin position.
2. Sorted the values in the EDS Prompt combo box.
3. Showed all entries for Selection.
4. Removed the space before the check digit for ucc\ean128 barcode.

LABELER V 6.0.6

Labeler 6.0.6 addresses the following issues:

1. When Labeler is opened from a registered Wasp product, the labels will no longer print in Demo mode.
2. Fixed the issue where the datagrid did not show the customer addresses for QuickBooks data source.
3. Allowed barcodes to be moved to a negative left value.
4. Fixed printing issues some Zebra printers encountered.
5. Added a registry key to fix Zebra printing issue Oneup=1.
6. Fixed code128 w/ UCCEAN caption bug.
7. Fixed code39 caption bug where it was showing 4 special charaters wrong.
8. Add WPL to the base product
9. Changed the size of the spinner buttons on the props form
