WaspTime : How to back up database

Max Holden - 2017-04-10 - Software

WaspTime Multiple Versions:

This article describes how to perform a backup in WaspTime. To backup the WaspTime database, go to Tools, Database Backup. By default, it will create a backup with filename WaspTime5_<date stamp>.bkp. You can change the filename on this screen if you desire. When you click Backup, it will schedule the backup to be created within 2 minutes.

You can also click Schedule Backup on that window to set it to automatically make backups once, daily or monthly at a specified time.

The backup files will be located in C:\Program Files\Microsoft SQL Server\MSSQL.1\MSSQL\Backup on the database server machine. If you need to change that location, you can click Set Backup Location on this window. If this is being done from the database server machine, you can browse to the folder. Otherwise, you must type in the desired path.
