WaspTime: How to manually install or uninstall the WaspTimeServer service.

Internal User - 2018-02-23 - WaspTime

Instructions are provided below for installing and uninstalling the WaspTimeServer service (after the main WaspTime installation has been completed).

Manually Install the WaspTimeServer Service:

1. Start a **Command** prompt as Administrator.
2. For 64-bit Windows, enter the following command, then press **ENTER**:
   cd C:\Program Files (x86)\Wasp Technologies\WaspTime

   For 32-bit Windows, enter the following command, then press **ENTER**:
   cd C:\Program Files\Wasp Technologies\WaspTime
3. Enter the following command, then press **ENTER** (include a space after wasptimeserver):
   wasptimeserver -i

   You will not receive any feedback if the installation is successful. If you receive an error stating: "*System.Configuration.InstallException*", the service is probably already installed.
4. To start the service, enter the following command, then press **ENTER**:
   net start wasptimeserver

Manually Uninstall the WaspTimeServer Service:

1. Start a **Command** prompt as Administrator.
2. For 64-bit Windows, enter the following command, then press **ENTER**:
   cd C:\Program Files (x86)\Wasp Technologies\WaspTime

   For 32-bit Windows, enter the following command, then press **ENTER**:
   cd C:\Program Files\Wasp Technologies\WaspTime
3. Enter the following command, then press **ENTER** (include a space after wasptimeserver):
   wasptimeserver -u

   You will not receive any feedback if the uninstall is successful. If you receive an error stating "*System.Configuration.InstallException*", the service is probably already uninstalled.
