WaspTime: We use Sage for the Payroll service, but the Employee IDs have a letter in them, and WaspTime will accept only numbers

Jason - 2017-04-10 - Version 7

The only version of Sage 50 supported by the WaspTime Payroll Export is the UK Sage 2008 edition.

Some users have found that they can edit their export file for import to Sage or other payroll services that have a letter in the employee id to add that letter to the file, but it will be a manual process each pay period.
