WPA206 - How do I make the Scan2Key function come on automatically, even after a soft reset?

Internal User - 2017-04-10 - Hardware

You can put the file called Scan2Key in the startup folder.

You must show all files and folders in your Windows directory to find the Scan2Key.exe.

Send a shortcut to the desktop.

Cut the file from your desktop.

Then go to the Windows folder.

Open the Startup folder and paste the shortcut.
