WPL305 - The ribbon and labels were installed incorrectly. Now the printer head is all gummed up - I need to clean or replace the printer head.

Internal User - 2023-04-18 - Printers

With the 305 printer, the first thing you can try is to take rubbing alcohol (70% iso-propyl alcohol) and a cotton swab and rub over the printhead several times, then try printing again.

This is all it takes to clean the head.
