WRP8055 Thermal Printer - I'm looking for code that will allow my homebrew POS application to communicate with the Wasp Receipt Printer.

Internal User - 2017-04-10 - Printers

The Wasp Receipt printer is an Epson Emulation. So all normal Epson codes will work in the printer. Other than that if you simply send a text string down to the printer it should print normally. That is all we do in our Quickstore program to get a printout.
